SUMMARY

Data Engineer with 3+ years at Amazon and 15+ years across analytics, automation, and security. I design serverless AWS data platforms (Glue, Lambda, Redshift, S3, CloudFront, EventBridge), build ETL pipelines and production SQL, and ship full-stack applications in Python, TypeScript, and SQL. Owner of a production AWS account that passed formal security review. Founder of an AI-powered SaaS. AWS Cloud Engineering, Cybersecurity, and Software Development certified; B.S. Computer Science in progress at WGU.

EXPERIENCE

Amazon — 3 years 6 months

Data Analyst (also Bin Meister) | August 2024 – Present | United States

- Architected a serverless AWS analytics platform serving 7 fulfillment centers with real-time KPIs — Andes/Redshift → Datanet → S3, rendered via Chart.js on CloudFront with IAM least-privilege and Origin Access Control.
- Built 12 automated ETL pipelines (Cradle/Glue → S3 → Redshift) and authored 35+ production SQL queries powering live dashboards – stow/pick feeds, Time-Off-Task detection, UPH, and defect analytics.
- Provisioned and own a full AWS account end-to-end (IAM, S3, EC2, CloudFront, QuickSight, CloudFormation IaC) that passed a formal Application Security Review (ASR); self-remediated Sev2 incidents under SLA.
- Engineered a CloudFormation pipeline (EventBridge cron → Glue → Redshift → S3 → Lambda → SES) for automated daily inventory reporting – production-grade infrastructure-as-code.
- Designed an Amazon Q AI-agent framework (Lambda actions, OpenAPI specs, Terraform) enabling natural-language querying of operational data — a reusable platform adopted by peer analysts.
- Built Goldilocks, a real-time capacity platform with a 13x speed gain over browser scraping; adopted at 3+ sites where peers reverse-engineered the compiled tool for its operational value.
- As Bin Meister, single-handedly owned all cubic-feet capacity management for the entire LC3 team — depreciating PHL5 and launching HPA1 (capacity planning, retrofits, zone config) with zero critical disruptions.
- Served as Test Analyst validating the full package lifecycle across all process paths; works across the broader AWS stack including SageMaker, Athena, Data Firehose, and Detective/CSPM.
- Mentored multiple data engineers on Cradle, Redshift, QuickSight, Lambda, and Glue — the recognized network go-to for data infrastructure guidance.

Supervisor | March 2023 – August 2024 | United States

- Developed automation macros that reduced a 1-hour manual process to 10 minutes — an 83% efficiency gain adopted across team workflows.
- Independently identified and built automation solutions that reclaimed significant operational hours for strategic initiatives.

Problem Solver / Ambassador | November 2022 – March 2023 | United States

- Served as Subject Matter Expert conducting audits and managing AWS programs (FC Research, GraVis, Eagle Eye) to support operational excellence.
- Directed and coached associates, delivered training, and authored standard work procedures to improve team performance and workflow accuracy.

Snagwire

Founder & Engineer | 2025 – Present | snagwire.net

- Founded and operate an AI-powered deal-intelligence SaaS — full-stack on Next.js, TypeScript, and Supabase with 10 autonomous AI agents (Gemini) aggregating real-time pricing across Amazon, Walmart, eBay, and Best Buy.
- Own the entire stack: product, security hardening, Lemon Squeezy/Stripe payments, Twilio notifications, affiliate APIs, and Vercel CI/CD deployment.

Self-Employed

Investment Analyst | June 2010 – Present | United States

- Built proprietary financial analysis tools using thinkScript for rapid interpretation of chart patterns across day and swing trading strategies.
- Automated real-time news collection via APIs for 50+ companies, augmenting fundamental analysis with comprehensive market event coverage.
- Applied advanced technical analysis (Regression, Wyckoff Accumulation/Distribution) to enhance predictive modeling informed by macroeconomic indicators.

Scientific Games

Analyst | January 2014 – August 2017 | United States

- Enhanced lottery machine monitoring using expertise in Random Number Generators and security features, improving anomaly detection by 15%.
- Streamlined automated machine update cycles, reducing technology deployment times by 20%.
- Maintained stringent security clearance and protocols for systems critical to lottery integrity.

EDUCATION

Bachelor of Science, Computer Science

Western Governors University | 2025 – 2027

Certification, Cybersecurity

Correlation One | 2024

Honors Certification, Software Development

Correlation One | 2023

Certification, Cloud Engineering

AWS Cloud Institute / Skillbuilder | 2023

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript, JavaScript, VBA, HTML/CSS

Data & Cloud: AWS (Glue, Lambda, Redshift, S3, EC2, CloudFront, EventBridge, IAM, QuickSight, Athena, SageMaker, Data Firehose), CloudFormation, Terraform, ETL, Cradle/Datanet, Pandas

Web & Tools: Next.js, Supabase, Flask, Chart.js, Plotly, Selenium, Git, Tableau, Power BI, Stripe/Lemon Squeezy

Security & Ops: Cybersecurity, ASR/Shepard, AWS Detective, CSPM, Risk Management, ACMS, STEM, BinConf
