SUMMARY

Data Analyst at Amazon (3+ years) doing data-engineering work, with 15+ years across analytics, automation, software development, and security. I design serverless AWS data platforms (Glue, Lambda, Redshift, S3, CloudFront, EventBridge) serving 7 distribution centers, build ETL pipelines and 35+ production SQL queries, and ship full-stack applications in Python & TypeScript. Owner of a production AWS account that passed formal security review; founder of an AI-powered SaaS. AWS Cloud Engineering, Cybersecurity & Software Development certified; B.S. Computer Science in progress at WGU.

EXPERIENCE

Amazon — Data Analyst (also Bin Meister)

Aug 2024 – Present

- Architected a serverless AWS analytics platform serving 7 distribution centers with real-time KPIs — Redshift → Datanet → S3 → Chart.js on CloudFront, with IAM least-privilege and Origin Access Control; 3 dashboard views across 11 analytical datasets.
- Built 12 automated ETL pipelines — scheduled SparkSQL jobs on Cradle running daily into S3, feeding QuickSight datasets, analyses & dashboards — covering Machine Gun detection, pick shorts, z-level violations, amnesty accountability, and ship-failed moves.
- Engineered a CloudFormation pipeline (EventBridge cron → Glue → Redshift → S3 → Lambda → SES) delivering automated daily email reporting to leadership inboxes with zero manual intervention.
- Provisioned and own a full AWS account end-to-end (IAM, S3, EC2, CloudFront, QuickSight, CloudFormation IaC) that passed a formal Application Security Review (ASR); self-remediated Sev2 incidents under SLA.
- Designed an Amazon Q AI-agent framework (Lambda actions, OpenAPI specs, Terraform) enabling natural-language querying of operational data — a reusable platform adopted by peer analysts.
- Built Goldilocks, a real-time capacity-management platform with a 13x speed gain over browser scraping; adopted at 3+ sites where peers reverse-engineered the compiled tool for its operational value.
- Authored 35+ production SQL queries powering dashboards — live stow/pick feeds, Time-Off-Task detection, associate UPH, wrong-ASIN defects, and site-wide management rollups.
- As Bin Meister, single-handedly owned all cubic-feet capacity for the entire LC3 team — depreciating the PHL5 fulfillment center and launching the HPA1 distribution center, including retrofits, capacity reconfiguration, and ACMS bin-type-level adjustments.
- Served as Test Analyst validating the full package lifecycle across all process paths; managed the SortTech Equipment Management (STEM) system; mentored multiple engineers on Cradle, Redshift, QuickSight, Lambda & Glue.

Amazon — Supervisor

Mar 2023 – Aug 2024

- Developed automation macros that cut a 1-hour manual process to 10 minutes — an 83% efficiency gain adopted across team workflows.
- Independently identified and built automation solutions that reclaimed significant operational hours for strategic initiatives.

Amazon — Problem Solver / Ambassador

Nov 2022 – Mar 2023

- Served as SME conducting audits and managing AWS programs (FC Research, GraVis, Eagle Eye) to support operational excellence; coached associates, delivered training, and authored standard work procedures.

Snagwire — Founder & Engineer

2025 – Present

- Founded and operate an AI-powered deal-intelligence SaaS — full-stack on Next.js, TypeScript & Supabase with 10 autonomous AI agents (Gemini) aggregating real-time pricing across Amazon, Walmart, eBay & Best Buy.
- Own the entire business: product, security hardening, Lemon Squeezy/Stripe payments, Twilio notifications, affiliate API integrations, and Vercel CI/CD deployment; entered in the Gemini XPRIIZE competition.

Hardy Family Fund — Portfolio Manager & Quantitative Developer

Jun 2010 – Present

- Built proprietary financial-analysis tools using thinkScript for rapid chart-pattern interpretation across day and swing strategies; automated real-time news collection via APIs for 50+ companies.

Scientific Games — Analyst

Jan 2014 – Aug 2017

- Enhanced lottery-machine monitoring using RNG and security expertise (15% better anomaly detection); streamlined automated update cycles, cutting deployment times 20%; maintained strict security clearance.

EDUCATION & CERTIFICATIONS

B.S. Computer Science — Western Governors University (2025–2027) • AWS Cloud Engineering — AWS Cloud Institute (2023)

Cybersecurity — Correlation One (2024) • Software Development (Honors) — Correlation One (2023)

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript, JavaScript, VBA, HTML/CSS

Data & Cloud: AWS (Glue, Lambda, Redshift, S3, EC2, CloudFront, EventBridge, IAM, QuickSight, Athena, SageMaker, Data Firehose), CloudFormation, Terraform, ETL, SparkSQL, Cradle/Datanet, Pandas

Web & Tools: Next.js, Supabase, Flask, Chart.js, Plotly, Selenium, Git, Tableau, Power BI, Stripe/Lemon Squeezy

Security & Ops: Cybersecurity, ASR/Shepard, AWS Detective, CSPM, Risk Management, ACMS, STEM, BinConf
