SUMMARY

Data Analyst at Amazon (3+ years) doing data-engineering work, with 15+ years across analytics, automation, and security. I design serverless AWS data platforms (Glue, Lambda, Redshift, S3, CloudFront, EventBridge) serving 7 distribution centers, build ETL pipelines and 35+ production SQL queries, and ship full-stack apps in Python & TypeScript. Owner of a production AWS account that passed formal security review; founder of an AI-powered SaaS. AWS Cloud Engineering, Cybersecurity & Software Development certified.

EXPERIENCE

Amazon — Data Analyst (also Bin Meister)

Aug 2024 – Present

- Architected a serverless AWS analytics platform serving 7 distribution centers with real-time KPIs — Redshift → Datanet → S3 → Chart.js on CloudFront, with IAM least-privilege and Origin Access Control.
- Built 12 automated ETL pipelines — scheduled SparkSQL on Cradle running daily into S3, feeding QuickSight datasets, analyses & dashboards — plus automated daily email reporting via Lambda → SES.
- Provisioned and own a full AWS account end-to-end (IAM, EC2, CloudFront, QuickSight, CloudFormation IaC) that passed a formal Application Security Review; self-remediated Sev2 incidents under SLA.
- Designed an Amazon Q AI-agent framework (Lambda actions, OpenAPI, Terraform) for natural-language data querying; built Goldilocks, a real-time capacity platform with a 13x speed gain adopted at 3+ sites.
- As Bin Meister, owned all cubic-foot capacity for the entire LC3 team — depreciating the PHL5 fulfillment center and launching the HPA1 distribution center with zero critical disruptions.

Amazon — Supervisor / Problem Solver

Nov 2022 – Aug 2024

- Built automation that cut a 1-hour manual process to 10 minutes (83% gain), adopted team-wide; served as SME managing AWS programs (FC Research, GraVis, Eagle Eye).

Snagwire — Founder & Engineer

2025 – Present

- Founded and operate an AI-powered SaaS — full-stack on Next.js, TypeScript & Supabase with 10 autonomous AI agents (Gemini) aggregating real-time pricing across Amazon, Walmart, eBay & Best Buy; own payments (Lemon Squeezy/Stripe), Twilio, and Vercel CI/CD.

Hardy Family Fund — Portfolio Manager & Quantitative Developer

Jun 2010 – Present

- Built proprietary financial-analysis tools (thinkScript) and automated real-time news collection via APIs for 50+ companies; applied technical analysis (Regression, Wyckoff) to systematic trading strategies.

EDUCATION & CERTIFICATIONS

B.S. Computer Science — Western Governors University (2025–2027) • AWS Cloud Engineering — AWS Cloud Institute (2023)

Cybersecurity — Correlation One (2024) • Software Development (Honors) — Correlation One (2023)

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript, JavaScript, VBA, HTML/CSS

Data & Cloud: AWS (Glue, Lambda, Redshift, S3, EC2, CloudFront, EventBridge, IAM, QuickSight, Athena, SageMaker, Data Firehose), CloudFormation, Terraform, ETL, SparkSQL, Cradle/Datanet, Pandas

Web & Tools: Next.js, Supabase, Flask, Chart.js, Plotly, Selenium, Git, Tableau, Power BI, Stripe/Lemon Squeezy

Security & Ops: Cybersecurity, ASR/Shepard, AWS Detective, CSPM, Risk Management, ACMS, STEM, BinConf
